Dear person in charge

I bought ARIGATO-PRO these days.
Now I would like to ask with you about some registration.

At the first stage of download, because I was not sure about something,
I tried to touch and proceed some commands.
I remember that after I registered 2 mail address in "Autoresponder Campaigns",
I deleted mails.

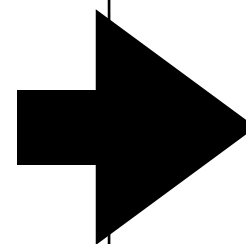

And after I could know how to use, I tried to set mail, however I could not register
any mails in "Newsletter" nor "Autoresponder Campaigns", and the message as
"There are no newsletters yet" was remained.

After that I proceeded uninstall, and I tried to install again.
However no progress yet.

And now I would like to know how to register the mail.
For your further reference, here is address of log-in page for my test as below.
<https://shinku.okinawa/lp/test-page/>

Also I send pdf data as attached files about my process of registration.

I hope your kind checking and soonest advise.

If you are on WP Network, you should activate the plugin as site admin and NOT as superadmin.

If this is not the case, provide me admin access to have a look.

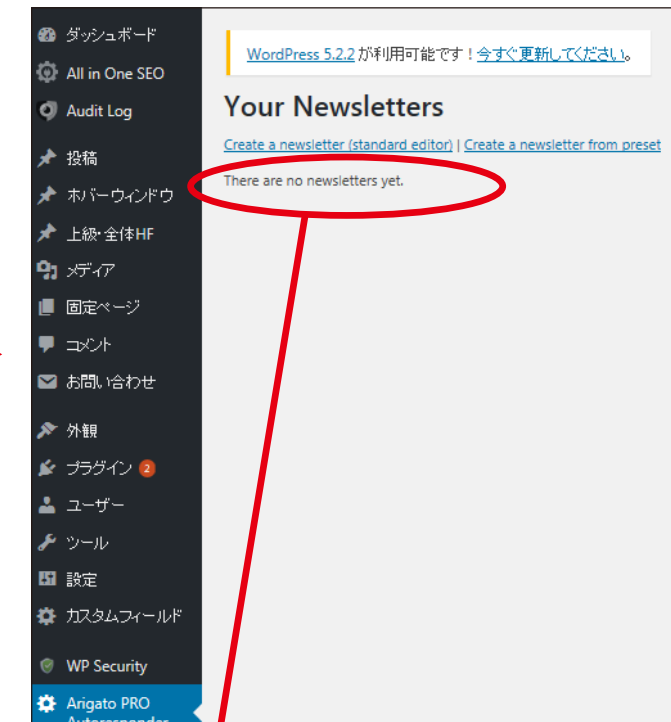

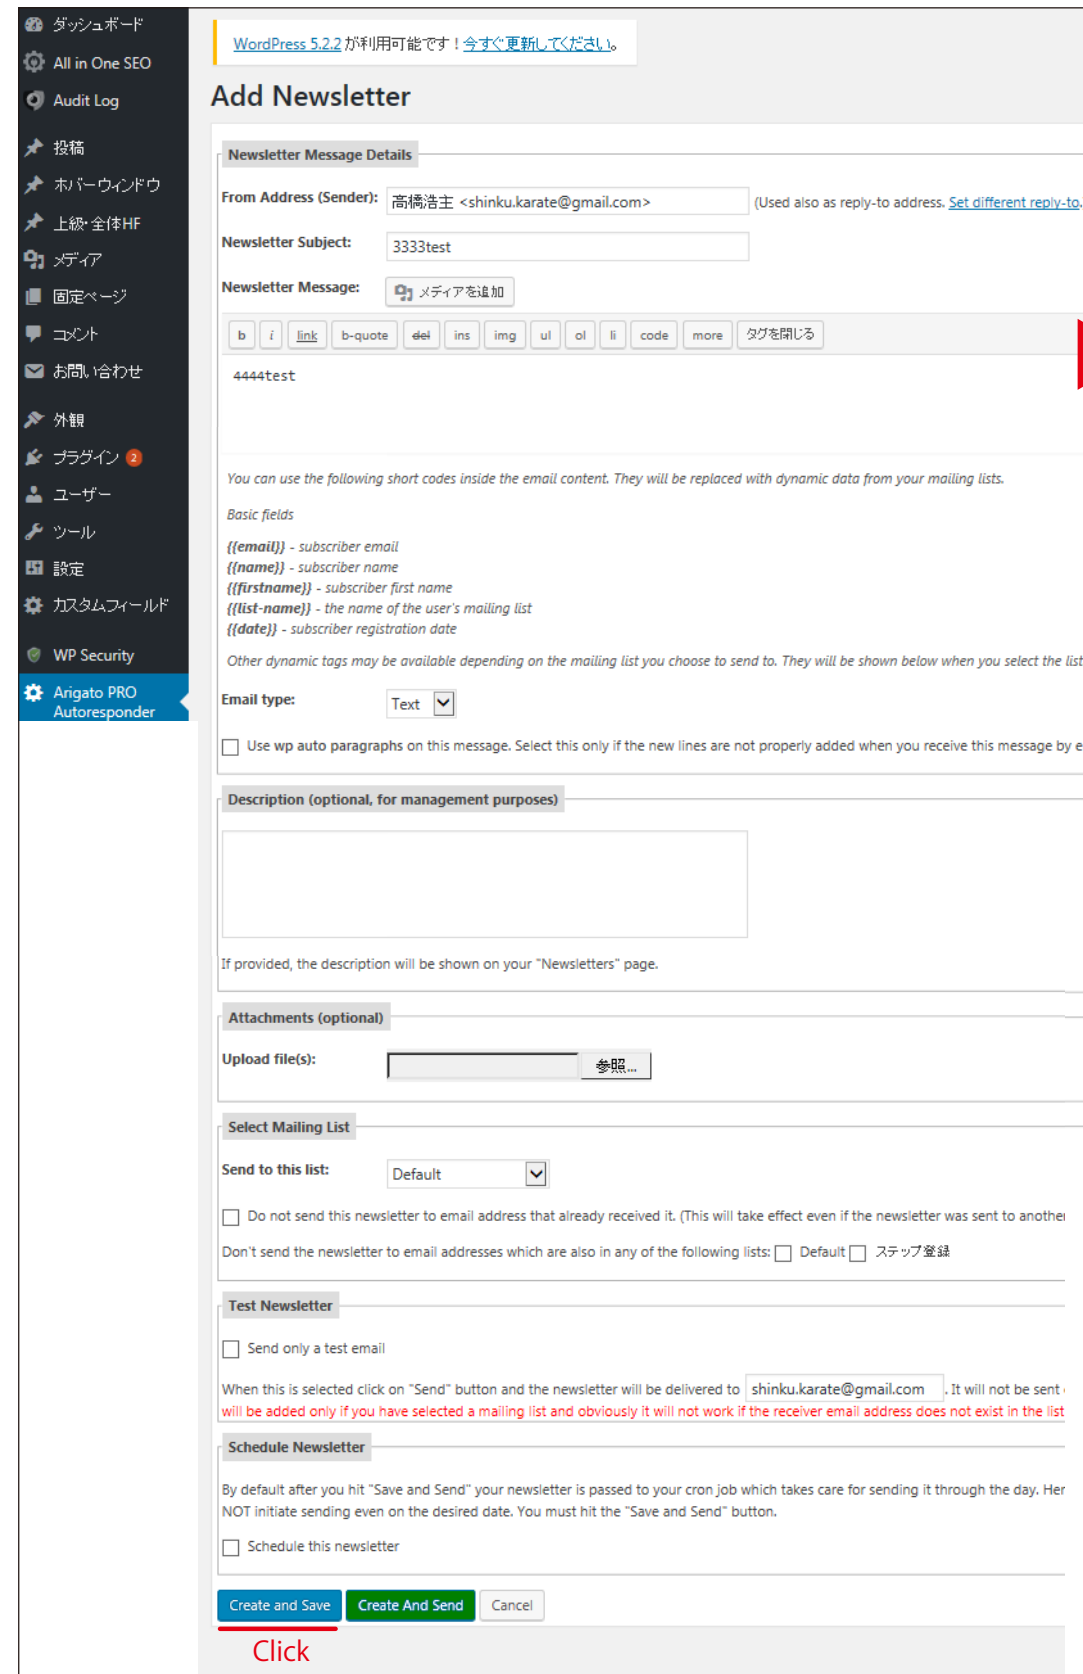

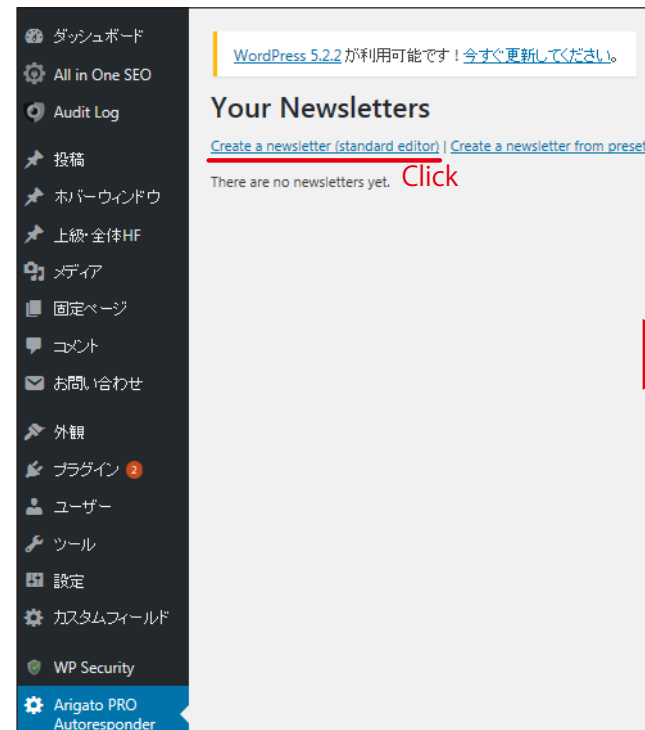

Bob

Thank you for your reply and advise.

Different from previous user "shinku", I registered new user as "sutekara" on the site.

And I tried again several times with authority "keymaster" or others, however I could not register mails.

I send the photo about user registration as attached file for your refference. Please check and let me now your advise.

You have registered a WP user, not a subscriber through an Arigato PRO subscription form.

If you want WP users to be added to the mailing lists you have to select the following checkbox:

☒ Automatically subscribe in this list everyone who registers in my blog (By default to avoid spam this will happen after they log-in for the first time!)

Do this when user role is:

☒ Subscribe immediately when user registers - don't wait for first login. This will respect the mailing list double opt-in configuration.
